

Liste der Gefäßpflanzen Österreichs

Version 1.0 (4. Februar 2019)

Christian Gilli, Walter Gutermann, Angelika Billensteiner und Harald Niklfeld

Einleitung

Die hier bereitgestellte Tabelle bietet einen Katalog der in Österreich wildwachsend beobachteten Gefäßpflanzen (Farn- und Blütenpflanzen), und zwar sowohl der einheimischen als auch der eingebürgerten und der unbeständig verschleppten oder verwilderten Sippen. In taxonomisch-nomenklatorischer Hinsicht ist sie ein ergänzter Auszug aus der Referenzliste, die derzeit (Anfang Februar 2019) in der Datenbank zur Floristischen Kartierung Österreichs verwendet wird. Damit wird eine Linie fortgeführt, die ihren Ursprung in der „Liste der Gefäßpflanzen Mitteleuropas“ (Ehrendorfer 1967) genommen hat. Nach deren regional und taxonomisch erweiterter 2. Auflage (Gutermann 1973) wurden Systematik und Namen im Rahmen der österreichischen Kartierung und anderer Projekte weiterhin intern aktualisiert – oft nach Vorgaben von W. Gutermann (Zwischenstand: Gutermann & Justin 1993). Auch die vielen in Österreich unbeständig auftretenden Neophyten wurden nunmehr einbezogen (Quellen: Walter & al. 2002; dazu unveröffentlichte Nachträge von F. Essl sowie neuere Publikationen). Beim Einbau neuer Ergebnisse der Verwandtschaftsforschung wurde jeweils auf die Kontinuität der Datenhaltung innerhalb der floristischen Kartierung geachtet; manche Änderungen blieben einstweilen noch zurückgestellt, sind aber in Vorbereitung. Publikationen und Vorhaben, die sich weitgehend dieser Bezugsbasis bedienen haben, sind unter anderem regionale Verbreitungsatlantiken (Salzburg, Kärnten), Florenwerke (Steiermark; Tirol und Vorarlberg), Rote Listen (Österreich und mehrere Bundesländer), die „Pflanzengesellschaften Österreichs“ und externe Datenbanken. In unserer Nachbarschaft repräsentiert der Südtiroler Florenkatalog (Wilhelm & al. 2006) unsere Linie. Die drei bisherigen Auflagen der „Exkursionsflora von Österreich“ (Adler & al. 1994) bzw. „... von Österreich, Liechtenstein und Südtirol“ (Fischer & al. 2005, 2008) bieten zwar eine dem Grundsatz nach eigenständige Taxonomie, sind aber von M.A. Fischer in engem Kontakt zur taxonomischen Basis der Floristischen Kartierung in Österreich und Südtirol konzipiert worden. Zwischen der kommenden, regional erweiterten 4. Auflage (Fischer & al., in Vorbereitung) und unserer Arbeitsgruppe wird eine gegenseitige Abstimmung erfolgen, bei der auch die ausständigen Anpassungen an neuere Forschungsergebnisse möglichst im gleichen Sinn verwirklicht werden sollen.

Die Liste ist „Work in progress“ und wird in Zukunft in Abständen aktualisiert und inhaltlich erweitert werden. Unter anderem sind Hinweise auf wichtige Synonyme und zum Vorkommen der Taxa in den österreichischen Bundesländern sowie erklärende Anmerkungen geplant. Für kritische Kommentare und ergänzende Mitteilungen sind wir jederzeit dankbar (christian.gilli@univie.ac.at; harald.niklfeld@univie.ac.at).

Die Tabelle steht in den Formaten Excel, Pdf und CSV bereit. Sie umfasst folgende Spalten, der Inhalt weiter unten näher erläutert wird:

Taxonname
(Übergeordnete Einheit)
Rangstufe
Akzeptanzstufe
Floristischer Status
Änderung in Planung
Name laut „Exkursionsflora“

Rolf Marschner danken wir für die Erstellung eines digitalen Auszugs aus der dritten Auflage der „Exkursionsflora“, durch den deren Vergleich mit unserer Liste sehr erleichtert wurde. Der Kommission für interdisziplinäre Ökosystemforschung (KIÖS) der Österreichischen Akademie der Wissenschaften sind wir für die Unterstützung der Aktualisierung der Liste zu Dank verpflichtet.

Erläuterungen

Taxonname („taxonname“)

Die Namen aller erfassten taxonomischen Einheiten von der Gattung abwärts sowie verschiedener informeller Artengruppen (Aggregate u. dgl.) sind hier in derjenigen Form verzeichnet, wie sie derzeit in der Datenbank zur Floristischen Kartierung Österreichs in Verwendung stehen, somit ohne die nomenklatorischen Autoren. Wo es die Unterscheidung erfordert, sind den Namen Zusätze beigefügt, die den Umfang der Einheit angeben (s.lat., s.str., s.strictiore, s.strictiss.). Seltener Zusätze verweisen auf die Interpretation des Namens in Bezug zum Typus (s.orig.) oder zu einem davon abweichenden Gebrauch (auct.). Vom Begriff „Aggregat“ (Zusatz „agg.“), der in kritischen Verwandtschaftsgruppen auch Pflanzen zu dokumentieren hilft, die nicht bis zur Art bestimmt wurden, wird in relativ vielen Fällen Gebrauch gemacht. In Einzelfällen können Aggregate auch weiter unterteilt sein: Subaggregat (subagg.), Infraaggregat (infraagg.).

Besonderheiten apomiktischer Formenkreise: Bei *Alchemilla* werden die herkömmlichen Aggregate aus praktischer Notwendigkeit provisorisch weitergeführt, auch wenn sie zum Teil dem Konzept Fröhners (so in der „Exkursionsflora“) nicht mehr entsprechen. Bei *Hieracium* (s.lat.) wurden einige Taxa nach Hinweisen von G. Gottschlich eingefügt, die Abtrennung der Gattungen *Pilosella* und *Schlagintweitia* aber noch zurückgestellt. Die *Rubus*-Kleinarten wurden, soweit schon gültig beschrieben, im Sinn der Arbeitsgruppe von K. Pagitz, M. Hohla, G. Király, B. Trávníček und Kollegen ausgewählt; die zusätzlichen Taxa aus der überholten Fassung in der „Exkursionsflora“ sind daher weggelassen. Bei *Taraxacum* sind die Kleinarten der unzureichend erforschten Sektionen *Ruderalia* (= *T. officinale* agg.) und *Erythrosperma* (= *T. laevigatum* agg.) nicht aufgenommen.

Die Reihenfolge der Einträge ist grundsätzlich alphabetisch, jedoch sind Aggregate einschließlich der zugehörigen Arten innerhalb ihrer Gattung vorangestellt. Gleiches gilt für eventuelle Subaggregate und Infraaggregate innerhalb ihrer übergeordneten Einheiten. Die Zuordnungshierarchie ist in der Pdf-Version der Tabelle durch gestufte Einrückungen angezeigt. (In der Excel- und in der CSV-Version sind die Zuordnungen in der Spalte „parent“ festgelegt.)

Die Kartierungs-Taxonomie berücksichtigt an sich ganz Mitteleuropa. Da hier aber nur die aus Österreich bekannten Sippen dargestellt sind, treten gelegentlich auch Paare von Einträgen auf: Arten mit einer einzigen österreichischen Unterart oder Aggregate mit einer einzigen österreichischen Art.

Übergeordnete Einheit („parent“)

In der Excel- und in der CSV-Version der Tabelle wird hier für alle Einheiten unterhalb der Gattung angegeben, zu welcher in der Rangstufenleiter nächst höheren Einheit sie gehören.

Rangstufe („taxgrade“)

Hier ist die Rangstufe des Taxons oder der Gruppe angegeben. Die hierarchische Abfolge ist Gattung (gen) – Aggregat (agg) – Subaggregat (subagg) – Infraaggregat (infraagg) – Art (spec, spec-x) – Unterart (ssp, ssp-x) – Varietät (var). Die seltenen Abkürzungen „spec-x“ und „ssp-x“ treten dort auf, wo derzeit weiter oder aber enger gefasste Art- bzw. Unterart-Umgrenzungen aus dokumentationstechnischer Notwendigkeit parallel geführt werden.

Akzeptanzstufe („taxstate“)

Die eingetragenen Buchstaben codieren folgen Stufen:

X akzeptierte Einheit

- P provisorisch akzeptierte Einheit und/oder provisorisch akzeptierter Name
- F fragliche Einheit
- H dokumentationstechnisch begründeter Hilfsbegriff
- V in Mitteleuropa nur mit einer Unterart vertretene Art

Floristischer Status („florstate“)

Hier wird angegeben, welchen floristischen Status eine Sippe in Österreich nach derzeitiger Kenntnis maximal besitzt. Wenn nebeneinander Vorkommen verschiedener Wertigkeit bestehen, gilt eine Rangordnung: einheimisch > eingebürgert > unbeständig. Folgende Symbole werden verwendet (nach absteigender Wertigkeit geordnet):

- einheimisch (inkl. archäophytisch)
- † einst einheimisch, heute erloschen oder verschollen
- e eingebürgert (mit den Sonderfällen ae = allgemein eingebürgert, le = lokal eingebürgert)
- u unbeständig (eingeschleppt oder verwildert; bisher keine Etablierung nachgewiesen)
- ? Vorkommen fraglich

Ein Fragezeichen nach einem der Status-Codes bezieht sich auf die Einschätzung des Status, nicht auf das Vorkommen als solches.

Änderung in Planung („§“)

In dieser Spalte verweist das Zeichen § darauf, dass für diese Einheit in Zukunft eine Änderung geplant ist oder zumindest erwogen wird. Dies betrifft vor allem die Berücksichtigung neuerer Forschungsergebnisse, die sich in der Neubewertung der Taxa und in ihrer Benennung auswirken können.

Name laut „Exkursionsflora“ („taxonname_exfl3“)

Hier sind die in der 3. Auflage der „Exkursionsflora“ (Fischer & al. 2008) für das entsprechende Taxon verwendeten Namen angeführt. Wenn die Einheit in der Exkursionsflora breiter gefasst ist, wird das gegebenenfalls durch den Zusatz „p.p.“ (pro parte, zum Teil) ausgedrückt. Ausgangsbasis für den Vergleich war ein von R. Marschner erstellter, von M.A. Fischer zur Verfügung gestellter digitaler Auszug aus der Exkursionsflora.
